16. SORU

The Incas were among the ancient people that used to live in South America. They used both conquest and peaceful assimilations to expand their empire (16)---- it became the largest in pre-Columbian America. Expansion was remarkably rapid, starting in earnest in the reign of Pachacuti around 1438. Pachacuti and his son, Tupac Inca, created a huge federal system consisting of four provinces, each (17)---- by an Inca governor. Following each new conquest, magnificent roads, many of which were paved, were built to link it to the capital of Cuzco and the rest of the empire. With its high-quality building work, Machu Pichu is the best preserved (18)---- of the Inca civilisation. It is today a fine example of architecture and planning (19)---- being abandoned in the 16th century. The quality of the stonework, the high altitude of its position and the numerous temples that have been identified among its ruins seem to indicate that Machu Pichu was very important (20)---- the Inca people.

- A) whether B) whenever C) unless
D) if E) until

People have often reported seeing animals, inanimate objects, and people who have previously died. They may be 'ghosts' or 'angels' and some involve quite complicated scenes or bizarre situations. These are known as hallucinations. Some visual hallucinations are silent, but in some, people speak, often directly to the individual experiencing the hallucination and give them specific commands. But why do hallucinations occur? There are a number of psychological explanations for their occurrence. Freudians see hallucinations as projections of unconscious wishes or wants. For example, what a person experiences as "real" in a hallucination is actually something they felt but could not express because it was felt subconsciously. Cognitive psychologists point to problems in cognitive processing, particularly metacognition, which is concerned with the understanding of others' behaviours. However, it is the biological psychologists who focus most clearly on the causes. They see hallucinations primarily as deficits in brain states resulting from damage and chemical imbalances. They have been able to identify the chemical processes that lead to hallucinations. Nevertheless, explaining why a particular individual has a very particular hallucination remains something of a mystery.

According to the passage, biological psychologists ----.

- A. see hallucinations as the subconscious of an individual with hidden wishes and desires
- B. claim that hallucinations may occur due to some physical or chemical problems in the brain
- C. focus on seeing some spiritual concepts such as ghosts and angels resulting in bizarre situations
- D. regard hallucinations as the projections of other people's behaviours and their misinterpretation
- E. treat hallucinations by giving specific commands to an individual experiencing a hallucination

32. SORU

Sweden is Europe's fifth-largest country, with an area about the size of California. Roughly 1,600 km lie between its southernmost and northernmost points. About 15% of its area lies north of the Arctic Circle, where, for a few days each summer, the sun never sets, and never rises for a similar period in winter. The Swedish climate is not severe, thanks to the warming influence of the Gulf Stream. Only 7% of Sweden's area is cultivated farmland; more than half of the country is covered by timberlands, consisting mostly of coniferous forests. Mountains, fells, and wetlands occupy nearly a quarter of the country. Sweden has about 100,000 lakes, which include Vanern, the third-largest body of fresh water in Europe. The Swedes are proud of the natural beauty of their country and this large variety in landscape makes Sweden a prime travel destination for outdoor enthusiasts. Norrland, the northern three-fifths of the country, is rich in natural resources, including timber, ore deposits, and rivers, whose waterfalls contribute to the national energy supply. It is here that the local indigenous people earn their traditional livelihood herding reindeer.

Which of the following statements about Sweden is true according to the passage?

- A. Sweden is five times larger than California.
- B. A very small portion of the country is used for agriculture.
- C. Mountains and wetlands constitute a great majority of the country's surface area.
- D. Norrland, the northern three-fifths of the country, is uninhabited.
- E. Coniferous forests cover only a tiny proportion of the country

35. SORU

Britain's character has been shaped by its geographical position as an island. Having never been successfully invaded since 1066, its people have developed their own distinctive traditions and continue to delight in their own nonconformity. Britain's heritage can be seen in its ancient castles, cathedrals, and stately homes with their gardens and parklands. It is also evident in the many age-old customs played out across the nation throughout the year. For a small island, Britain encompasses a surprising variety in its regions, whose inhabitants maintain distinct identities. Scotland and Wales are separate countries from England with their own legislative assemblies. They also have their own surviving Gaelic languages and unique traditions. The landscape is varied, too, from the mountains of Wales, Scotland, and the north, through the flat expanses of the Midlands and eastern England, to the soft, rolling hills of the south and west. The long, broad beaches of East Anglia contrast with the rocky inlets along much of the west coast. Despite the spread of towns and cities over the last two centuries, rural Britain still flourishes. The countryside is dotted with farms and charming villages, with picturesque cottages, and lovingly tended gardens. The most populated part of the nation is the Southeast, close to London, where modern office buildings mirror the growth of the service and high-tech industries.

The ancient castles, cathedrals, and stately homes in Britain are an example of ----.

- A. its rich cultural past
- B. British disobedience
- C. the conflict between Scotland and Wales
- D. Britain's resistance to invasions
- E. the architecture still practised today

38. SORU

Influenced by the common misconception, films such as Jurassic Park show dinosaurs with tough, leathery, rhino-like skin, but it has since been proven that many dinosaur species were feathered. In a study, a group of scientists have analysed the fossilised remains of the bird-sized dinosaur Anchiornis, which lived 160 million years ago. The specimen has particularly well-preserved feather details, a feature that is usually lost during fossilisation. Covering its body, Anchiornis had unusual contour feathers plumage not used in flight that were soft and V-shaped, at around one to two centimetres in length. Longer flight feathers emerged in layers from all four of the animal's limbs. Anchiornis seems to have needed extra flight feathers because theirs were not zipped together like a bird's, and so generated less lift. Fossil feathers in particular are very hard to interpret for scientists because they are preserved as flat stains derived from the feather pigments. So, making an illustration of the dinosaur was very tough, but the researchers worked closely with a scientific illustrator and came up with the most accurate depiction of a dinosaur ever.

According to the passage, the skin of dinosaurs ----.

- is generally believed to lack feathers but, in fact, many dinosaur species had them
- was first discussed by the films like Jurassic Park before the scientific community
- started to change around 160 million years ago
- had an internal structure that made it impossible for them to fly
- is agreed to be more feathered compared to birds

SORU ÖNCÜLÜ

Fossil feathers in particular are very hard to interpret for scientists because they are preserved as flat stains derived from the feather pigments. So, making an illustration of the dinosaur was very tough, but the researchers worked closely with a scientific illustrator and came up with the most accurate depiction of a dinosaur ever.

According to the passage, the drawing of an Anchiornis ----.

- A) required a lot of work but resulted in the most realistic dinosaur depiction so far
- B) lacked the details showing the difference of flight feathers from birds
- C) inaccurately illustrated a bird-sized dinosaur to compare it to modern birds
- D) clarified that some dinosaurs were identical to today's feathery birds in terms of feather structure
- E) was largely influenced by the traditional depictions of dinosaurs by the film industry

41. SORU

Since the time of Christopher Columbus, Europeans have called the original inhabitants of North America "Indians". Giving them a common name is misleading since these people had no national identity. They lived in areas as diverse as the Arctic and the deserts of the southwest, and differed greatly in their lifestyles. In the north, the Cree hunted moose and caribou. Tribes such as the Huron and the Iroquois in the northeast and the Apache in the southwest were farmers, while those in the northwest relied on fishing. Before the Europeans arrived, some tribes of the great central plains cultivated the fertile lands along rivers and streams, while others hunted bison during the summer. After European contact, they took easily to the horses that were brought and used them to help in their hunting. The huge herds of bison then became more important to Plains Indians – they could eat their meat, make their skins into clothing and shelters, and use their bones and horns to make tools. Although they survived attempts by European settlers to wipe them out, few native Americans now follow a traditional lifestyle, but most are very proud of their ancestry.

According to the passage, giving a single common name to all the original inhabitants of North America was inappropriate because ----.

- A) they were quite diverse and were not identified as one unified entity
- B) they had nomadic lifestyles before settling down in different places
- C) very few of them are eager to follow the traditional lifestyle today
- D) it is still contradictory who the first nation that appeared in the region was
- E) they mostly farmed as well as hunting, especially bison

Few inventions have had a more immediate or lasting impact on world history than the railroad, the first mode of land transport capable of outdistancing the horse and camel.

A) The railroad, the mode of land transport which offered longer distances than the horse and camel for the first time, affected world history more directly and permanently than most other inventions.

B) Direct and permanent impact on world history came from a number of land transport inventions, one of which was the railroad, as it made it possible to travel longer distances compared to the horse and camel.

C) The horse and camel were outdistanced by the railroad, the first mode of land transport, which came as a more direct and lasting impact on world history compared to other inventions.

D) Different modes of land transport that are able to go longer distances than the horse and camel have been invented, but the railroad was the first to have a direct and long-lasting effect on world history.

E) World history has been influenced directly and permanently by a great number of inventions, including the railroad, which was the first mode of land transport that outperformed both the horse and camel in terms of distance.

Sociology is one of a number of social sciences which attempt to understand and explain the behaviour of human beings. Unlike some social sciences, it does not confine itself to one particular area of society. ---- It is hard to think of any significant area of life which has never been the subject of a sociological study.

A- Indeed, sociologists are concerned with a vast range of topics including shopping, popular music, poverty, and migration.

B- In sociology, then, it is essential to understand the social context in which human behaviour takes place.

C- A change in society such as the introduction of new technology can lead to new ways of behaving.

D- Socialisation is a lifelong process which continues as people change their jobs or roles and as society itself changes.

E- At the most basic level, sociology involves understanding the culture of the society in which social action occurs.

60. SORU

Microwave ovens do not directly cook food; what they do is heat water. The frequency of microwaves happens to be just right for exciting water molecules. ---- Nearly all food contains water, but microwaves will not cook completely dry food like cornflakes, rice or pasta.

A- Microwaves are a form of electromagnetic radiation that sits on the spectrum between radio waves and infrared light.

B- By spreading their energy evenly through food, the microwaves heat the water in it and the hot water cooks the food.

C- Microwave cookery is similar to heating food in a normal oven, except that the microwaves penetrate deeper and more quickly.

D- The molecules in the centre of your soup are not heated any quicker than those on the outside.

E- Exciting the water molecules means that the food rarely gets much hotter than 100°C, at which water boils.

61. SORU

Until now, there has not been a comprehensive map of soil bacteria, but a team of scientists recently took the first steps toward creating one and found out something surprising along the way. These researchers collected nearly 300 soil samples from 18 countries and as many different environments as possible. ---- However, the scientists found that across these different environments on Earth, a relatively small number of bacteria species dominated.

A- These tiny organisms, which populate every environment, play active roles in many of Earth's biological processes.

B- They create acidic environments, decompose dead organisms and release gases.

C- They were expecting to find a diverse array of bacteria species spanning different terrains.

D- With this new bacteria list, scientists have a starting point for studying the complex web of ecosystem.

E- Of the thousands of individual species of bacteria, only 20 percent of those are known to scientists.

62. SORU

The carbon cycle is the natural system that, ideally, creates a balance between carbon emitters (such as humans) and carbon absorbers (such as trees) so that the atmosphere does not contain an increasing amount of carbon dioxide. It is a huge process that involves oceans, land, and air. ---- You can think of it almost as the Earth breathing in and out.

A- The exchange of carbon dioxide between the ocean and the air happens at the surface of the water.

B- The seas' ability to absorb carbon dioxide has long been known to scientists.

C- The carbon cycle is called "in balance" when roughly the same amount of carbon that is being pumped into the air is being sucked out by something else.

D- Given the important role that carbon dioxide plays in warming the Earth, you may be surprised by how little of it is in the atmosphere.

E- Carbon dioxide is composed of one carbon atom and two oxygen atoms, connected by double bonds.

63. SORU

The creation of revolutionary products or practices has no timetable. Great minds give birth to innovations as inspiration hits, necessity requires, or happenstance would have it. ----

The Renaissance, for instance, was a period of great intellectual exploration, an era of innovation in arts, philosophy, medicine, engineering, and science. Inventions of the Renaissance include the printing press and movable type. It was also at this time that Leonardo da Vinci (1452–1519) drew the first plans for a flying machine, a precursor to planes and jets that would be devised and developed centuries later.

A- Human progress is now taking place at an unprecedented pace.

B- Nevertheless, the history of the human race can conceivably be called the story of innovation.

C- However, there have been a number of specifically fruitful periods of invention throughout history.

D- Also, their other inventions go beyond basic human needs to enhance human interaction.

E- Furthermore, the invention of the electric bulb is said to be a pure coincidence.

People who watch television more than four hours a day are twice as likely to have a major health issue compared with those who watch less.

A- Günde dört saatten fazla televizyon izleyen insanların, daha az izleyenlerle karşılaştırıldığında ciddi bir sağlık problemi yaşaması iki kat daha olasıdır.

B- Günde dört saatten fazla televizyon izleyenler, daha az izleyenlerle kıyaslandığında iki kat daha ciddi bir sağlık problemi yaşayabilirler.

C- Günde dört saatten fazla televizyon izleyen insanların karşılaştıkları ciddi sağlık problemlerinin, daha az izleyen insanlarınkiyle kıyaslandığında iki kat daha fazla olması muhtemeldir.

D- Daha az televizyon izleyen insanlarla karşılaştırıldığında günde dört saatten fazla televizyon izleyen insanların ciddi bir sağlık problemi yaşama olasılığının iki kat arttığı düşünülmektedir.

E- Günde dört saat daha fazla televizyon izleyenlerde ciddi bir sağlık problemiyle karşılaşma olasılığı, daha az izleyen insanlarınkine göre iki kat fazladır.

78. SORU

(I) Creativity tests, mostly devised over the last thirty years, are aimed at assessing the qualities and abilities that constitute creativity. (II) These tests evaluate mental abilities in ways that are different from – and even diametrically opposed to – conventional intelligence tests. (III) Because the kinds of abilities measured by creativity tests differ from those measured by intelligence quotient (IQ) tests, persons with the highest scores on creativity tests do not necessarily have the highest IQs. (IV) Most creativity tests in use today are based at least partially on the theory of creativity evolved by J.P. Guilford in the 1950s. (V) Creative people tend to have IQs that are at least average if not above average, but beyond a score of 120 there is little correlation between performance on intelligence and creativity tests.

A) I B) II C) III D) IV E) V

KAZANIMLARI

- Paragraf içinde anlam bütünlüğünü bozan cümleyi bulur.

4

(I) The Industrial Revolution brought great wealth to factory owners and made basic goods such as food and clothing cheaper than ever before. (II) During the Industrial Revolution, a great majority of workers in factories were children; as a result, accidents were very common. (III) However, the Industrial Revolution also created a new kind of poverty. (IV) Large numbers of people moved to the cities in search of work, where they were packed into crowded, dirty housing. (V) Many were unemployed and ended up in prison for debt, or forced to move into harsh lodgings called workhouses, where they performed hard labour for low wages.

80. SORU

(I) Since their earliest presence on Earth, humans have sought to make sense of their surroundings. (II) Survival depended on understanding the behaviour of a volcano, the flood cycles of a river, or the optimum time to cross a mountain pass. (III) Humans developed ways to record and pass on such information. (IV) Modern science and information gathering have given anthropologists more insight than ever before. (V) As they ventured from their places of origin, by land and by sea, people acquired a broader perspective of Earth's processes and of the patterns and impact of human settlement throughout the world.
